

Web/Mobile Developer

1 Role Description

The Web/Mobile Developer will report directly to the Senior Developer. The role will involve working as a team on new and existing websites. There will also be a primary focus around mobile development in HTML5 & Javascript. The applicant will also be comfortable with designing and developing websites and applications independently.

The role will include managing product life-cycle of our Cross Platform mobile application, public website and core UI elements of other existing products.

2 Key Responsibilities

- Design and Develop mobile applications.
- Size accurately projects supplied by the System Architect/Senior Developer
- Write detailed Implementation Guides for projects that are clear, concise and easy to read.
- Manage product documentation.
- Research of key areas of interest and document a report of findings.
- Work with the support team to act as Level 2 support.
- Maintenance of public facing website.

3 Experience Required

- Degree in a related field.
- 2+ Years Web Development Experience
- 1+ Years Mobile Development Experience
- Comfortable with working on Linux
- 2+ Years experience with HTML5, CSS, Javascript (Including frameworks like Prototype & Mootools), CMS (e.g. Drupal or Joomla), Shopping Carts (e.g. Magento, OSCommerce or OpenCart)
- Experience with Java, Objective-C, Issue Tracking and Source Control are an advantage.
